

Data Use Policy

Date of Last Revision: November 15, 2013

Information we receive and how it is used

- Information we receive about you
- Public information
- Usernames and User IDs
- How we use the information we receive
- Deleting and deactivating your account

Sharing and finding you on Facebook

- Control each time you post
- Control over your timeline
- Finding you on Facebook
- Access on phones and other devices
- Activity log
- What your friends and others share about you
- Groups
- Pages

Other websites and applications

- About Facebook Platform
- Controlling what information you share with applications
- Controlling what is shared when the people you share with use applications
- Logging in to another site using Facebook
- About social plugins
- About instant personalization
- Public search engines

Advertising and Facebook content

- Advertising
- Facebook content

Cookies, pixels and other similar technologies

Some other things you need to know

I. Information we receive and how it is used

Information we receive about you

We receive a number of different types of information about you, including:

Your information

Your information is the information that's required when you sign up for the site, as well as the information you choose to share.

- **Registration information:** When you sign up for Facebook, you are required to provide information such as your name, email address, birthday, and gender. In some cases, you may be able to register using other information, like your telephone number.
- **Information you choose to share:** Your information also includes the information you choose to share on Facebook, such as when you post a status update, upload a photo, or comment on a friend's story.

It also includes the information you choose to share when you communicate with us, such as when you contact us using an email address, or when you take an action, such as when you add a friend, like a Page or a website, add a place to your story, use our contact importers, or indicate you are in a relationship.

💡 Your name, profile pictures, cover photos, gender, networks, username and User ID are treated just like information you choose to make public.

💡 Your birthday allows us to do things like show you age-appropriate content and advertisements.

Information others share about you

We receive information about you from your friends and others, such as when they upload your contact information, post a photo of you, tag you in a photo or status update, or at a location, or add you to a group.

💡 When people use Facebook, they may store and share information about you and others that they have, such as when they upload and manage their invites and contacts.

Other information we receive about you

We also receive other types of information about you:

- We receive data about you whenever you use or are running Facebook, such as when you look at another person's timeline, send or receive a message, search for a friend or a Page, click on, view or otherwise interact with things, use a Facebook mobile app, or make purchases through Facebook.
- When you post things like photos or videos on Facebook, we may receive additional related data (or metadata), such as the time, date, and place you took the photo or video.

- We receive data from or about the computer, mobile phone, or other devices you use to install Facebook apps or to access Facebook, including when multiple users log in from the same device. This may include network and communication information, such as your IP address or mobile phone number, and other information about things like your internet service, operating system, location, the type (including identifiers) of the device or browser you use, or the pages you visit. For example, we may get your GPS or other location information so we can tell you if any of your friends are nearby, or we could request device information to improve how our apps work on your device.
- We receive data whenever you visit a game, application, or website that uses [Facebook Platform](#) or visit a site with a Facebook feature (such as a [social plugin](#)), sometimes through [cookies](#). This may include the date and time you visit the site; the web address, or URL, you're on; technical information about the IP address, browser and the operating system you use; and, if you are logged in to Facebook, your User ID.
- Sometimes we get data from our [affiliates](#) or our advertising partners, customers and other third parties that helps us (or them) deliver ads, understand online activity, and generally make Facebook better. For example, an advertiser may tell us information about you (like how you responded to an ad on Facebook or on another site) in order to measure the effectiveness of – and improve the quality of – ads.

As described in "[How we use the information we receive](#)" we also put together data from the information we already have about you, your friends, and others, so we can offer and suggest a variety of services and features. For example, we may make friend suggestions, pick stories for your News Feed, or suggest people to tag in photos. We may put together your current city with GPS and other location information we have about you to, for example, tell you and your friends about people or events nearby, or offer deals to you in which you might be interested. We may also put together data about you to serve you ads or other content that might be more relevant to you.

💡 When we get your GPS location, we put it together with other location information we have about you (like your current city). But we only keep it until it is no longer useful to provide you services, like keeping your last GPS coordinates to send you relevant notifications.

💡 We only provide data to our advertising partners or customers after we have removed your name and any other personally identifying information from it, or have combined it with other people's data in a way that it no longer personally identifies you.

Public information

When we use the phrase "public information" (which we sometimes refer to as "Everyone information"), we mean the information you choose to make public, as well as information that is always publicly available.

Information you choose to make public

Choosing to make your information public is exactly what it sounds like: **anyone**, including people off Facebook, will be able to see it. [Learn more](#).

Choosing to make your information public also means that this information:

- can be associated with you (i.e., your name, profile pictures, cover photos, timeline, User ID, username, etc.) even off Facebook;
- can show up when someone does a search on Facebook or on a public search engine;
- will be accessible to the Facebook-integrated games, applications, and websites you and your friends use; and
- will be accessible to anyone who uses our APIs such as our [Graph API](#).

💡 Sometimes you will not be able to select an audience when you post something (like when you write on a Page's wall or comment on a news article that uses our comments plugin). This is because some types of stories are always public stories. As a general rule, you should assume that if you do not see a [sharing icon](#), the information will be publicly available.

💡 When others share information about you, they can also choose to make it public.

Information that is always publicly available

The types of information listed below are always publicly available, and they are treated just like information you decided to make public:

- **Name:** This helps your friends and family find you. If you are uncomfortable sharing your real name, you can always [delete](#) your account.
- **Profile Pictures and Cover Photos:** These help your friends and family recognize you. If you are uncomfortable making any of these photos public, you can always delete them. Unless you delete them, when you add a new profile picture or cover photo, the previous photo will remain public in your profile picture or cover photo album.
- **Networks:** This helps you see who you will be sharing information with before you choose "Friends and Networks" as a custom audience. If you are uncomfortable making your network public, you can [leave the network](#).
- **Gender:** This allows us to refer to you properly.
- **Username and User ID:** These allow you to give out a custom link to your timeline or Page, receive email at your Facebook email address, and help make Facebook Platform possible.

Usernames and User IDs

Username and User IDs are the same thing – a way to identify you on Facebook. A User ID is a string of numbers and a username generally is some variation of your name. With your username, you get a custom link (a Facebook URL, such as www.facebook.com/username) to your timeline that you can give out to people or post on external websites.

If someone has your Username or User ID, they can use it to access information about you through the [facebook.com](https://www.facebook.com) website. For example, if someone has your Username, they can type [facebook.com/Username](https://www.facebook.com/Username) into their browser and see your public information as well as anything else you've let them see. Similarly, someone with your Username or User ID can access information about you through our APIs, such as our [Graph API](#). Specifically, they can access your public information, along with your age range, language and country.

If you do not want your information to be accessible to Platform applications, you can turn off all Platform applications from your [Privacy Settings](#). If you turn off Platform you will no longer be able to use any games or other applications until you turn Platform back on. For more information about the information that apps receive when you visit them, see [Other websites and applications](#).

💡 If you want to see information available about you through our Graph API, just type **[https://graph.facebook.com/\[User ID or Username\]?metadata=1](https://graph.facebook.com/[User ID or Username]?metadata=1)** into your browser.

💡 Your Facebook email address includes your public username like so: username@facebook.com. People can use your Facebook email address to send you messages and anyone in a message conversation can reply to it.

How we use the information we receive

We use the information we receive about you in connection with the services and features we provide to you and other users like your friends, our partners, the advertisers that purchase ads on the site, and the developers that build the games, applications, and websites you use. For example, in addition to helping people see and find things that you do and share, we may use the information we receive about you:

- as part of our efforts to keep Facebook products, services and integrations safe and secure;
- to protect Facebook's or others' rights or property;
- to provide you with location features and services, like telling you and your friends when something is going on nearby;
- to measure or understand the effectiveness of ads you and others see, including to deliver relevant ads to you;
- to make suggestions to you and other users on Facebook, such as: suggesting that your friend use our contact importer because you found friends using it, suggesting that another user add you as a friend because the user imported the same email address as you did, or suggesting that your friend tag you in a picture they have uploaded with you in it; and
- for internal operations, including troubleshooting, data analysis, testing, research and service improvement.

Granting us permission to use [your information](#) not only allows us to provide Facebook as it exists today, but it also allows us to provide you with innovative features and services we develop in the future that use the information we receive about you in new ways.

While you are allowing us to use the information we receive about you, you always own all of your information. Your trust is important to us, which is why we don't share information we receive about you with others unless we have:

- received your permission;
- given you notice, such as by telling you about it in this policy; or
- removed your name and any other personally identifying information from it.

Of course, for [information others share about you](#), they control how it is shared.

We store data for as long as it is necessary to provide products and services to you and others, including those described above. Typically, information associated with your account will be kept until your account is deleted. For certain categories of data, we may also tell you about specific data retention practices.

💡 We may enable access to [public information](#) that has been shared through our services.

💡 We may allow [service providers](#) to access information so they can help us provide services.

💡 We are able to suggest that your friend tag you in a picture by scanning and comparing your friend's pictures to information we've put together from your profile pictures and the other photos in which you've been tagged. If this feature is enabled for you, you can control whether we suggest that another user tag you in a photo using the "Timeline and Tagging" [settings](#). Learn more at: <https://www.facebook.com/help/tag-suggestions>

Deleting and deactivating your account

If you want to stop using your account, you can either **deactivate** or **delete** it.

Deactivate

Deactivating your account puts your account on hold. Other users will no longer see your timeline, but we do not delete any of your information. Deactivating an account is the same as you telling us not to delete any information because you might want to reactivate your account at some point in the future. You can deactivate your account at: <https://www.facebook.com/settings?>

tab=security

💡 Your friends will still see you listed in their list of friends while your account is deactivated.

Deletion

When you delete your account, it is permanently deleted from Facebook. It typically takes about one month to delete an account, but some information may remain in backup copies and logs for up to 90 days. You should only delete your account if you are sure you never want to reactivate it. You can delete your account at: https://www.facebook.com/help/contact.php?show_form=delete_account

Learn more at: <https://www.facebook.com/help/?faq=356107851084108>

💡 Certain information is needed to provide you with services, so we only delete this information after you delete your account. Some of the things you do on Facebook aren't stored in your account, like posting to a group or sending someone a message (where your friend may still have a message you sent, even after you delete your account). That information remains after you delete your account.

II. Sharing and finding you on Facebook

Control each time you post

Whenever you post content (like a status update, photo or check-in), you can select a specific audience, or even customize your audience. To do this, simply click on the sharing icon and choose who can see it.

🌐 Choose this icon if you want to make something **Public**. Choosing to make something public is exactly what it sounds like. It means that anyone, including people off Facebook, will be able to see or access it.

👤 Choose this icon if you want to share with your Facebook **Friends**.

⚙️ Choose this icon if you want to **Customize** your audience. You can also use this to hide your story from specific people.

If you tag someone, that person and their friends can see your story no matter what audience you selected. The same is true when you approve a tag someone else adds to your story.

Always think before you post. Just like anything else you post on the web or send in an email, information you share on Facebook can be copied or re-shared by anyone who can see it.

💡 Although you choose with whom you share, there may be ways for others to determine information about you. For example, if you hide your birthday so no one can see it on your timeline, but friends post "happy birthday!" on your timeline, people may determine your birthday.

💡 When you comment on or "like" someone else's story, or write on their timeline, that person gets to select the audience. For example, if a friend posts a Public story and you comment on it, your comment will be Public. Often, you can see the audience someone selected for their story before you post a comment; however, the person who posted the story may later change their audience. So, if you comment on a story, and the story's audience changes, the new audience can see your comment.

💡 You can control who can see the Facebook Pages you've "liked" by visiting your timeline, clicking on the Likes box on your timeline, and then clicking "Edit."

💡 Sometimes you will not see a sharing icon when you post something (like when you write on a Page's wall or comment on a news article that uses our comments plugin). This is because some types of stories are always public stories. As a general rule, you should assume that if you do not see a sharing icon, the information will be publicly available.

Control over your timeline

Whenever you add things to your timeline you can select a specific audience, or even customize your audience. To do this, simply click on the sharing icon and choose who can see it.

🌐 Choose this icon if you want to make something **Public**. Choosing to make something public is exactly what it sounds like. It means that anyone, including people off Facebook, will be able to see or access it.

👤 Choose this icon if you want to share with your Facebook **Friends**.

⚙️ Choose this icon if you want to **Customize** your audience. You can also use this to hide the item on your timeline from specific people.

When you select an audience for your friend list, you are only controlling who can see the entire list of your friends on your timeline. We call this a timeline visibility control. This is because your friend list is always available to the games, applications and websites you use, and your friendships may be visible elsewhere (such as on your friends' timelines or in searches). For example, if you select "Only Me" as the audience for your friend list, but your friend sets her friend list to "Public," anyone will be able to see your connection on your friend's timeline.

Similarly, if you choose to hide your gender, it only hides it on your timeline. This is because we, just like the applications you and your friends use, need to use your gender to refer to you properly on the site.

When someone tags you in a story (such as a photo, status update or check-in), you can choose whether you want that story to appear on your timeline. You can either approve each story individually or approve all stories by your friends. If you approve a story and later change your mind, you can remove it from your timeline.

💡 When you hide things on your timeline, like posts or connections, it means those things will not appear on your timeline. But, remember, anyone in the audience of those posts or who can see a connection may still see it elsewhere, like on someone else's timeline or in search results. You can also delete your posts or change the audience of content you post, which means you can remove people from or add people to the audience of the content.

💡 People on Facebook may be able to see mutual friends, even if they cannot see your entire list of friends.

💡 Some things (like your name, profile pictures and cover photos) do not have sharing icons because they are always publicly available. As a general rule, you should assume that if you do not see a sharing icon, the information will be publicly available.

Finding you on Facebook

To make it easier for your friends to find you, we allow anyone with your contact information (such as email address or telephone number) to find you through the Facebook search bar at the top of most pages, as well as other tools we provide, such as contact importers – even if you have not shared your contact information with them on Facebook.

You can choose who can look up your timeline using the email address or telephone number you added to your timeline through your [Privacy Settings](#). But remember that people can still find you or a link to your timeline on Facebook through other people and the things they share about you or through other posts, like if you are tagged in a friend's photo or post something to a public page.

💡 Your settings do not control whether people can find you or a link to your timeline when they search for content they have permission to see, like a photo or other story in which you've been tagged.

Access on phones and other devices

Once you share information with your friends and others, they may be able to sync it with or access it via their mobile phones and other devices. For example, if you share a photo on Facebook, someone viewing that photo could save it using Facebook tools or by other methods offered by their device or browser. Similarly, if you share your contact information with someone or invite someone to an event, they may be able to use Facebook or third party applications or devices to sync that information. Or, if one of your friends has a Facebook application on one of their devices, your information (such as the things you post or photos you share) may be stored on or accessed by their device.

💡 You should only share information with people you trust because they will be able to save it or re-share it with others, including when they sync the information to a device.

Activity log

Your activity log is a place where you can go to view most of your information on Facebook, including things you've hidden from your timeline. You can use this log to manage your content. For example, you can do things like delete stories, change the audience of your stories or stop an application from publishing to your timeline on your behalf.

💡 When you hide something from your timeline, you are not deleting it. This means that the story may be visible elsewhere, like in your friends' News Feed. If you want to delete a story you posted, choose the delete option.

What your friends and others share about you

Links and Tags

Anyone can add a link to a story. Links are references to something on the Internet; anything from a website to a Page or timeline on Facebook. For example, if you are writing a story, you might include a link to a blog you are referencing or a link to the blogger's Facebook timeline. If someone clicks on a link to another person's timeline, they'll only see the things that they are allowed to see.

A tag is a special type of link to someone's timeline that suggests that the tagged person add your story to their timeline. In cases where the tagged person isn't included in the audience of the story, it will add them so they can see it. Anyone can tag you in anything. Once you are tagged, you and your friends will be able to see it (such as in News Feed or in search).

You can choose whether a story you've been tagged in appears on your timeline. You can either approve each story individually or approve all stories by your friends. If you approve a story and later change your mind, you can always remove it from your timeline.

If you do not want someone to tag you, we encourage you to reach out to them and give them that feedback. If that does not work, you can block them. This will prevent them from tagging you going forward.

💡 Social reporting is a way for people to quickly and easily ask for help from someone they trust. Learn more at: https://www.facebook.com/note.php?note_id=196124227075034&__adt=3&__att=iframe

💡 If you are linked to in a private space (such as a message or a group) only the people who can see the private space can see the link. Similarly, if you are linked to a comment, only the people who can see the comment can see the link.

Other information

As described in the "[what your friends and others share about you](#)" section of this policy, your friends and others may share information about you. They may share photos or other information about you and tag you in their posts. If you do not like a particular post, tell them or [report the post](#).

Groups

Once you are in a Group, anyone in that Group can add you to a subgroup. When someone adds you to a Group, you will be listed as "invited" until you visit the Group. You can always leave a Group, which will prevent others from adding you to it again.

Pages

Facebook Pages are public pages. Companies use Pages to share information about their products. Celebrities use Pages to talk about their latest projects. And communities use Pages to discuss topics of interest, everything from baseball to the opera.

Because Pages are public, information you share with a Page is public information. This means, for example, that if you post a comment on a Page, that comment may be used by the Page owner off Facebook, and anyone can see it.

When you "like" a Page, you create a connection to that Page. The connection is added to your timeline and your friends may see it in their News Feeds. You may be contacted by or receive updates from the Page, such as in your News Feed and your messages. You can remove the Pages you've "liked" through your timeline or on the Page.

Some Pages contain content that comes directly from the Page owner. Page owners can do this through online plugins, such as an iframe, and it works just like the games and other applications you use through Facebook. Because this content comes directly from the Page owner, that Page may be able to collect information about you, just like any website.

💡 Page administrators may have access to insights data, which will tell them generally about the people that visit their Page (as opposed to information about specific people). They may also know when you've made a connection to their Page because you've liked their Page or posted a comment.

💡 To control who can see the Facebook Pages you've liked, visit our [Help Center](#).

III. Other websites and applications

About Facebook Platform

Facebook Platform (or simply Platform) refers to the way we help you share your information with the games, applications, and websites you and your friends use. Facebook Platform also lets you bring your friends with you, so you can connect with them off Facebook. In these two ways, Facebook Platform helps you make your experiences on the web more personalized and social.

Remember that these games, applications and websites are created and maintained by other businesses and developers who are not part of, or controlled by, Facebook, so you should always make sure to read their terms of service and privacy policies to understand how they treat your data.

Controlling what information you share with applications

When you connect with a game, application or website – such as by going to a game, logging in to a website using your Facebook account, or adding an app to your timeline – we give the game, application, or website (sometimes referred to as just "applications" or "apps") your basic info (we sometimes call this your "public profile"), which includes your User ID and your public information. We also give them your friends' User IDs (also called your friend list) as part of your basic info.

Your friend list helps the application make your experience more social because it lets you find your friends on that application. Your User ID helps the application personalize your experience because it can connect your account on that application with your Facebook account, and it can access your basic info, which includes your [public information](#) and friend list. This includes the information you choose to make public, as well as information that is [always publicly available](#). If the application needs additional information, such as your stories, photos or likes, it will have to ask you for specific permission.

The "[Apps](#)" setting lets you control the applications you use. You can see the permissions you have given these applications, the last time an application accessed your information, and the audience on Facebook for timeline stories and activity the application posts on your behalf. You can also remove applications you no longer want, or turn off all Platform applications. When you turn all Platform applications off, your User ID is no longer given to applications, even when your friends use those applications. But you will no longer be able to use any games, applications or websites through Facebook.

💡 When you first visit an app, Facebook lets the app know your language, your country, and whether you are in an age group, for instance, under 18, between 18–20, or 21 and over. Age range lets apps provide you with age-appropriate content. If you install the app, it can access, store and update the information you've shared. Apps you've installed can update their records of your basic info, age range, language and country. If you haven't used an app in a while, you should consider removing it. Once you remove an app, it won't be able to continue to update the additional information you've given them permission to access, but it

may still hold the information you have already shared. You always can contact the app directly and request that they delete your data. Learn more at: <https://www.facebook.com/help/how-apps-work>

💡 Sometimes a game console, mobile phone, or other device might ask for permission to share specific information with the games and applications you use on that device. If you say okay, those applications will not be able to access any other information about you without asking specific permission from you or your friends.

💡 Sites and apps that use [Instant Personalization](#) receive your User ID and friend list when you visit them.

💡 You always can remove apps you've installed by using your app settings at: <https://www.facebook.com/settings/?tab=applications>. But remember, apps may still be able to access your information when the people you share with use them. And, if you've removed an application and want it to delete the information you've already shared with it, you should contact the application. Visit the application's page on Facebook or its own website to learn more about the app. For example, Apps may have reasons (e.g. legal obligations) to retain some data that you share with them.

Controlling what is shared when the people you share with use applications

Just like when you share information by email or elsewhere on the web, information you share on Facebook can be re-shared. This means that if you share something on Facebook, anyone who can see it can share it with others, including the games, applications, and websites they use.

Your friends and the other people you share information with often want to share your information with applications to make their experiences on those applications more personalized and social. For example, one of your friends might want to use a music application that allows them to see what their friends are listening to. To get the full benefit of that application, your friend would want to give the application her friend list – which includes your User ID – so the application knows which of her friends is also using it. Your friend might also want to share the music you “like” on Facebook. If you have made that information public, then the application can access it just like anyone else. But if you've shared your likes with just your friends, the application could ask your friend for permission to share them.

You can control most of the information other people can share with applications they use from the “App” settings page. But these controls do not let you limit access to your [public information](#) and friend list.

If you want to completely block applications from getting your information when your friends and others use them, you will need to turn off all Platform applications. This means that you will no longer be able to use any third-party Facebook-integrated games, applications or websites.

💡 If an application asks permission from someone else to access your information, the application will be allowed to use that information only in connection with the person that gave the permission, and no one else.

💡 For example, some apps use information such as your friends list, to personalize your experience or show you which of your friends use that particular app.

Logging in to another site using Facebook

Facebook Platform lets you log into other applications and websites using your Facebook account. When you log in using Facebook, we give the site your User ID (just like when you connect with any other application), but we do not share your email address or password with that website through this process without your permission.

If you already have an account on that website, the site may also be able to connect that account with your Facebook account. Sometimes it does this using what is called an “email hash”, which is similar to searching for someone on Facebook using an email address. Only the email addresses in this case are hashed so no email addresses are actually shared between Facebook and the website.

How it works

The website sends over a hashed version of your email address, and we match it with a database of email addresses that we have also hashed. If there is a match, then we tell the website the User ID associated with the email address. This way, when you log into the website using Facebook, the website can link your Facebook account to your account on that website.

About social plugins

Social plugins are buttons, boxes, and stories (such as the Like button) that other websites can use to present Facebook content to you and create more social and personal experiences for you. While you view these buttons, boxes, and stories on other sites, the content comes directly from Facebook.

Sometimes plugins act just like applications. You can spot one of these plugins because it will ask you for permission to access your information or to publish information back to Facebook. For example, if you use a registration plugin on a website, the plugin will ask your permission to share your basic info with the website to make it easier for you to register for the website. Similarly, if you use an “Add To Timeline” plugin, the plugin will ask for your permission to publish stories about your activities on that website to Facebook.

If you make something public using a plugin, such as posting a public comment on a newspaper's website, then that website can access your comment (along with your User ID) just like everyone else.

💡 If you post something using a social plugin and you do not see a sharing icon, you should assume that story is Public. For example, if you post a comment through a Facebook comment plugin on a site, your story is Public and everyone, including the website, can see your story.

💡 Websites that use social plugins can sometimes tell that you have engaged with the social plugin. For example, they may know that you clicked on a Like button in a social plugin.

💡 We receive data when you visit a site with a social plugin. We keep this data for a maximum of 90 days. After that, we remove your name and any other personally identifying information from the data, or combine it with other people's data in a way that it is no longer associated with you. Learn more at: <https://www.facebook.com/help/social-plugins>

About instant personalization

Instant personalization (sometimes also referred to as "Start now") is a way for Facebook to help partners (such as Bing and Rotten Tomatoes) on and off Facebook to create a more personalized and social experience for logged in users than a [social plugin](#) can offer. When you visit a site or app using instant personalization, it will know some information about you and your friends the moment you arrive. This is because sites and apps using instant personalization can access your User ID, your friend list, and your [public information](#).

The first time you visit a site or app using instant personalization, you will see a notification letting you know that the site or app has partnered with Facebook to provide a personalized experience.

The notification will give you the ability to disable or turn off instant personalization for that site or app. If you do that, that site or app is required to delete all of the information about you it received from Facebook as part of the instant personalization program. In addition, we will prevent that site from accessing your information in the future, even when your friends use that site.

If you decide that you do not want to experience instant personalization for all partner sites and apps, you can disable instant personalization from the "[Apps](#)" settings page.

If you turn off instant personalization, these partner third party sites and apps will not be able to access your public information, even when your friends visit those sites.

💡 If you turn off an instant personalization site or app after you have been using it or visited it a few times (or after you have given it specific permission to access your data), it will not automatically delete information about you it received through Facebook. Like all other apps, the site is required by our policies to delete information about you if you ask it to do so.

How it works

To join the instant personalization program, a potential partner must enter into an agreement with us designed to protect your privacy. For example, this agreement requires that the partner delete information about you if you turn off instant personalization when you first visit the site or app. It also prevents the partner from accessing any information about you until you or your friends visit its site.

Instant personalization partners sometimes use an email hash process to see if any of their users are on Facebook and get those users' User IDs. This process is similar to searching for someone on Facebook using an email address, except in this case, the email addresses are hashed so no actual email addresses are exchanged. The partner is also contractually required not to use your User ID for any purpose (other than associating it with your account) until you or your friends visit the site.

When you visit a site or app using instant personalization, we provide the site or app with your User ID and your friend list (as well as your age range, locale, and gender). The site or app can then connect your account with your friends' accounts to make the site or app instantly social. The site can also access public information associated with any of the User IDs it receives, which it can use to make them instantly personalized. For example, if the site is a music site, it can access your music interests to suggest songs you may like, and access your friends' music interests to let you know what they are listening to. Of course it can only access your or your friends' music interests if they are public. If the site or app wants any additional information, it will have to get your specific permission.

Public search engines

Your public search setting controls whether people who enter your name on a public search engine may see your public timeline (including in sponsored results). You can find your public search setting on the "[Privacy Settings and Tools](#)" settings page.

💡 This setting does not apply to search engines that access your information as an application using Facebook Platform.

💡 If you turn your public search setting off and then search for yourself on a public search engine, you may still see a preview of your timeline. This is because some search engines cache information for a period of time. You can learn more about how to request a search engine to remove you from cached information at: <https://www.facebook.com/help/?faq=13323>

IV. Advertising and Facebook content

Advertising

Facebook offers a [range of products](#) that allow advertisers to reach people on and off Facebook. In addition to the information we provide in this section, you can also learn more about advertising products, how they work, our partnerships, and the [controls](#) you

have, by visiting our [“Advertising on Facebook”](#) page.

When we deliver ads, we do not share your information (information that personally identifies you, such as your name or contact information) with advertisers unless you give us permission. We may provide advertisers with information when we have removed your name and other personally identifying information from it, or combined it with other information so that it no longer personally identifies you. For example, we may tell an advertiser how its ads perform or how many people viewed or clicked on their ads or install an app after seeing an ad.

So we can show you content that you may find interesting, we may use all of the [information we receive about you](#) to serve ads that are more relevant to you. For example, this includes:

- information you provide at registration or add to your account or timeline,
- things you share and do on Facebook, such as what you like, and your interactions with advertisements, partners, or apps,
- keywords from your stories, and
- things we infer from your use of Facebook.

For many ads we serve, advertisers may choose their audience by location, demographics, likes, keywords, and any other information we receive or infer about users. Here are some of the ways advertisers may target relevant ads:

- demographics and interests: for example, 18 to 35 year-old women who live in the United States and like basketball;
- topics or keywords: for example, “music” or people who like a particular song or artist;
- Page likes (including topics such as products, brands, religion, health status, or political views): for example, if you like a Page about gluten-free food, you may receive ads about relevant food products; or
- categories (including things like “moviegoer” or a “sci-fi fan”): for example, if a person “likes” the “Star Trek” Page and mentions “Star Wars” when they check into a movie theater, we may infer that this person is likely to be a sci-fi fan and advertisers of sci-fi movies could ask us to target that category.

In addition to delivering relevant ads, Facebook sometimes pairs ads with [social context](#), meaning stories about social actions that you or your friends have taken. For example, an ad for a sushi restaurant’s Facebook Page may be paired with a News Feed story that one of your friends likes that Page.

We also sometimes serve these same types of ads on other sites or may serve just the social context (such as with ads served by others), so that the ads are more relevant to you. Just like any other content you share on Facebook, only people who you’re already sharing with on Facebook would see it when it is paired with an ad. We also allow advertisers to reach people on Facebook using the information they already have about you (such as email addresses or whether you have visited their websites previously). You can learn more about ads, social context, and our partnerships, including the relevant settings and controls available to you, by visiting the [Advertising on Facebook](#) page.

💡 If an advertiser chooses to run ads, we serve the ads to people who meet criteria the advertiser selects. So, if someone views or otherwise interacts with the ad, the advertiser might assume that the person meets the criteria they selected (for example, that the person is an 18-to-35-year-old woman who lives in the U.S. and likes basketball). We require advertisers to comply with our [Advertising Guidelines](#), including provisions relating to the use of sensitive data.

💡 Advertisers and their partners sometimes use cookies or other similar technologies in order to serve and measure ads and to make their ads more effective. [Learn more about cookies, pixels and similar technologies](#).

💡 When you post a story on Facebook and an advertiser [sponsors it](#), nothing changes about the audience of the post. Only the people who could originally see the post (the people you shared it with) are eligible to see it.

Facebook content

We like to tell you about some of the features and tools your friends and others use on Facebook, to help you have a better experience. For example, if your friend uses our friend finder tool to find more friends on Facebook, we may tell you about it to encourage you to use it as well. This of course means your friend may similarly see suggestions based on the things you do. But we will try to only show it to friends that could benefit from your experience.

V. Cookies, pixels and other similar technologies

Cookies are small pieces of data that are stored on your computer, mobile phone or other device. Pixels are small blocks of code on webpages that do things like allow another server to measure viewing of a webpage and often are used in connection with cookies.

We use technologies like cookies, pixels, and local storage (like on your browser or device, which is similar to a cookie but holds more information) to provide and understand a range of products and services. Learn more at: <https://www.facebook.com/help/cookies>

We use these technologies to do things like:

- make Facebook easier or faster to use;
- enable features and store information about you (including on your device or in your browser cache) and your use of Facebook;
- deliver, understand and improve advertising;
- monitor and understand the use of our products and services; and

- protect you, others and Facebook.

For example, we may use these tools to know you are logged in to Facebook, to help you use social plugins and share buttons, or to know when you are interacting with our advertising or Platform partners.

We may ask advertisers or other partners to serve ads or services to computers, mobile phones or other devices, which may use a cookie, pixel or other similar technology placed by Facebook or the third party (although we would not share information that personally identifies you with an advertiser).

Most companies on the web use cookies (or other similar technological tools), including our advertising and Platform partners. For example, our Platform partners, advertisers or Page administrators may use cookies or similar technologies when you access their apps, ads, Pages or other content.

💡 Cookies and things like local storage help make Facebook work, like allowing pages to load faster because certain content is stored on your browser or by helping us authenticate you to deliver personalized content.

💡 To learn more about how advertisers generally use cookies and the choices advertisers provide, visit the Network Advertising Initiative at http://www.networkadvertising.org/managing/opt_out.asp, the Digital Advertising Alliance at <http://www.aboutads.info/>, the Internet Advertising Bureau (US) at <http://www.iab.net> or the Internet Advertising Bureau (EU) at <http://youronlinechoices.eu/>.

💡 Refer to your browser or device's help material to learn what controls you can often use to remove or block cookies or other similar technologies or block or remove other data stored on your computer or device (such as by using the various settings in your browser). If you do this, it may affect your ability to use Facebook or other websites and apps.

VI. Some other things you need to know

Safe harbor

Facebook complies with the U.S.–EU and U.S.–Swiss Safe Harbor frameworks as set forth by the Department of Commerce regarding the collection, use, and retention of data from the European Union. To view our certification, visit the U.S. Department of Commerce's Safe Harbor website at: <https://safeharbor.export.gov/list.aspx>. As part of our participation in the Safe Harbor program, we agree to resolve disputes you have with us in connection with our policies and practices through TRUSTe. If you would like to contact TRUSTe, visit: <https://feedback-form.truste.com/watchdog/request>

Contact us with questions or disputes

If you have questions or complaints regarding our Data Use Policy or practices, please contact us by mail at 1601 Willow Road, Menlo Park, CA 94025 if you reside in the U.S. or Canada, or at Facebook Ireland Ltd., Hanover Reach, 5–7 Hanover Quay, Dublin 2 Ireland if you live outside the U.S. or Canada. Anyone may also contact us through this help page: https://www.facebook.com/help/contact_us.php?id=173545232710000

Responding to legal requests and preventing harm

We may access, preserve and share your information in response to a legal request (like a search warrant, court order or subpoena) if we have a good faith belief that the law requires us to do so. This may include responding to legal requests from jurisdictions outside of the United States where we have a good faith belief that the response is required by law in that jurisdiction, affects users in that jurisdiction, and is consistent with internationally recognized standards. We may also access, preserve and share information when we have a good faith belief it is necessary to: detect, prevent and address fraud and other illegal activity; to protect ourselves, you and others, including as part of investigations; or to prevent death or imminent bodily harm.

Information we receive about you, including financial transaction data related to purchases made with Facebook, may be accessed, processed and retained for an extended period of time when it is the subject of a legal request or obligation, governmental investigation, or investigations concerning possible violations of our terms or policies, or otherwise to prevent harm. We also may retain information from accounts disabled for violations of our terms for at least a year to prevent repeat abuse or other violations of our terms.

Access requests

You can access and correct most of your personal data stored by Facebook by logging into your account and viewing your timeline and activity log. You can also download a copy of your personal data by visiting your “[Settings](#)” (General Account Settings page), clicking on “Download a copy of your Facebook data” and then clicking on the link for your expanded archive. Learn more at: <https://www.facebook.com/help/?faq=226281544049399>

Notifications and Other Messages

We may send you notifications and other messages using the contact information we have for you, like your email address. You can control most of the notifications you receive, including ones from Pages you like and applications you use, using controls we provide, such as a control included in the email you receive or in your “[Notifications](#)” settings.

Friend Finder

We offer tools to help you upload your friends' contact information so that you and others can find friends on Facebook, and invite friends who do not use Facebook to join, and so we can offer you and others better experiences on Facebook through suggestions and other customized experiences. If you do not want us to store this information, visit this help page at: https://www.facebook.com/contact_importer/remove_uploads.php.

If you give us your password, we will delete it after you upload your friends' contact information.

Invitations

When you invite a friend to join Facebook, we send a message on your behalf using your name, and we may also include names and pictures of other people your friend might know on Facebook. We'll also send a few reminders to those you invite, but the invitation will also give your friend the opportunity to opt out of receiving other invitations to join Facebook.

Memorializing accounts

We may memorialize the account of a deceased person. When we memorialize an account, we keep the timeline on Facebook, but limit access and some features. You can report a deceased person's timeline at: https://www.facebook.com/help/contact.php?show_form=deceased

We also may close an account if we receive a formal request that satisfies certain criteria.

Affiliates

We may share information we receive with businesses that are legally part of the same group of companies that Facebook is part of, or that become part of that group (often these companies are called affiliates). Likewise, our affiliates may share information with us as well. This sharing is done in compliance with applicable laws including where such applicable laws require consent. We and our affiliates may use shared information to help provide, understand, and improve our services and their own services.

Service Providers

We give your information to the people and companies that help us provide, understand and improve the services we offer. For example, we may use outside vendors to help host our website, serve photos and videos, process payments, analyze data, conduct and publish research, measure the effectiveness of ads, or provide search results. In some cases we provide the service jointly with another company, such as the Facebook Marketplace. In all of these cases our partners must agree to only use your information consistent with the agreement we enter into with them, as well as this Data Use Policy.

Security and bugs

We do our best to keep your information secure, but we need your help. For more detailed information about staying safe on Facebook, visit the [Facebook Security Page](#). We try to keep Facebook up, bug-free and safe, but can't make guarantees about any part of our services or products.

Change of Control

If the ownership of our business changes, we may transfer your information to the new owner so they can continue to operate the service. But they will still have to honor the commitments we have made in this Data Use Policy.

Notice of Changes

If we make changes to this Data Use Policy we will notify you (for example, by publication here and on the [Facebook Site Governance Page](#)). If the changes are material, we will provide you additional, prominent notice as appropriate under the circumstances. You can make sure that you receive notice directly by liking the [Facebook Site Governance Page](#).

Opportunity to comment

Unless we make a change for legal or administrative reasons, or to correct an inaccurate statement, we will give you seven (7) days to provide us with comments on the change. After the comment period, if we adopt any changes, we will provide notice (for example, on the [Facebook Site Governance Page](#) or in this policy) of the effective date.

Information for users outside of the United States and Canada

Company Information: The website under www.facebook.com and the services on these pages are being offered to users outside of the U.S. and Canada by Facebook Ireland Ltd., Hanover Reach, 5-7 Hanover Quay, Dublin 2 Ireland. The company Facebook Ireland Ltd. has been established and registered in Ireland as a private limited company, Company Number: 462932, and is the data controller responsible for your personal information.

Directors: Sonia Flynn (Irish), Shane Crehan (Irish).

Your California privacy rights

California law permits residents of California to request certain details about what personal information a company shares with third parties for the third parties' direct marketing purposes. Facebook does not share your information with third parties for the third parties' own and independent direct marketing purposes unless we receive your permission. Learn more about the [information we receive and how it is used](#) and [other websites and applications](#). If you have questions about our sharing practices or your rights under California law, please write us at 1601 Willow Road, Menlo Park, CA 94025 or contact us through this help page: https://www.facebook.com/help/contact_us.php?id=173545232710000
